

Form, Fill & Seal Bale Packaging Machines

The Challenger Form, Fill and Seal bale packaging machine has been developed to wrap polythene around and end seal a variety of baled materials such as chopped hay, chopped straw, shredded paper, woodchips, woodshavings, etc. They can be manufactured to a wide variety of specifications to manufacture bales with a mass of between 1 kg and 25 kg and can produce bales at a rate of up to 400 bales per hour.

These packaging machines can include a register to suit a repeating artwork pattern, a carry handle on smaller bales, they can include a modem to allow remote fault finding, they can be linked to collation devices such as spiral wrappers and palletisation robots and they can be linked to other manufacturers balers should the need arise.

A metering feed conveyor system will be included as a carefully controlled feed of material is essential to the correct functioning of this equipment and other conveying equipment, rotary screens, etc can be manufactured to suit the clients requirements.

These machines are supplied with comprehensive machine guarding, can be painted in any standard RAL colour and will be supplied with an Operation & Maintenance Handbook which includes a troubleshooting guide
