

A second hand 25 kg Baler for woodshavings with an adjustable on-board, weigh cell, measuring device is for sale. This machine could also be used to bale chopped hay, chopped straw, chopped miscanthus, haylage, wood chip or a similar material.

The raw material need to be fed into a hopper at the top of the Baler where it is accurately weighed and, once the set weight is reached, 'bomb doors' deliver the measured material into the baler where it is compressed into a 25 kg nominal mass bale.

This Baler can be connected to a form, fill and seal bale packaging unit or can be used in a conventional way where bags are placed on a chute and the bale is ejected into it (please note that the form, fill and seal bale packaging unit is not included but one can be supplied).

The machine is powered by a 37 kW, 400/3/50 VAC electro hydraulic power unit sited adjacent to the machine, it is connected by flexible hydraulic hose assemblies and it is capable of reliably producing 150 bales per hour with a form, fill and seal machine and higher volumes if used in a conventional form.

Challenger originally manufactured the machine circa October 2005, it has been well maintained by the previous owner and the machine can currently be viewed working in the UK if required.

Price - £ P.O.A.
