

## INTERNAL ACID DE-RUSTING MACHINE

The Challenger Drumtech Internal Acid De-rusting Machine is designed to de-rust the inside of open and closed top 205-litre steel drums.

This machine is fitted with a pneumatically powered and interlocked door as standard (not shown on the photograph above) and the equipment vents both prior to and after the acid de-rusting cycle to keep the exposure levels to within European Standards.

All materials used are acid resistant.

### Technical Information

Production rate	30 drums per hour
Electrical supply	400/3/50 VAC
Environmental protection	IP55
Power requirement	2.2 kW
Compressed air pressure	6.0 Bar
