

CUTTER AND BEADER

The Challenger Drumtech Cutter and Beading machine allows drums, which may otherwise be discarded due to leaks or for other reasons, to be converted into open top drums. One side is equipped with an efficient powered rotating cutting blade and on the opposite side is a beading system, which forms a safe edge to the cut end.

Lids that have been removed automatically form a shape during cutting and this allows them to be used for lids for open top drums when fitted with a new rubber seal and clip.

An internal polythene bag is often used for holding powder materials.

Technical Information

Production rate	Up to 60 drums per hour
Electrical supply	400/3/50 VAC
Environmental protection	IP55
Power requirement	4.0 kW
Compressed air pressure	6 Bar
