

# CHALLENGER BEER BARREL HOIST

**The handling of beer barrels, cylindrical objects and other similar components has never been as simple with the Challenger Beer Barrel Hoist.**

**The Hoist can be installed in cellars and basements in public houses and licensed premises or wherever you need to lift any items from a lower level to a higher level with no civil work necessary in the vast majority of cases.**

**Designed for simplicity of operation and minimum of maintenance the lift can be supplied in either a 415/3/50 VAC or 240/1/50 VAC format and is controlled safely by a simple push button controller. The lifting and lowering operation stops on release of the respective button providing full control of the product position at any time during the cycle.**

**The Challenger hoist is ideal for handling the awkward shaped product such as beer kegs, drums and gas cylinders from platform to cellar or lorry to ground level, thus reducing the problems associated with manual handling requirements.**

**Each unit is designed and manufactured to suit a specific travel height and meets the current European directive 90/269/EEC for Health & Safety for the manual handling of loads.**

### **THE STANDARD CHALLENGER BEER BARREL HOIST FEATURES INCLUDE**

- All assemblies are CE marked and are supplied with a feed ramp
