SYSTEMS & MECHANICAL HANDLING EQUIPMENT

A used Challenger 1kg manual Baler.

This semi-automatic machine consists of a standard Challenger (circa 2004) petpack baler with integrated manual weigh scale, vertical compression and horizontal eject functions.

The baler is supplied with a local control panel as shown below and a 7.5-kW hydraulic power pack with all interconnecting hoses.

The semi-automatic Pet Pack baler utilises a simple control system. Operators weigh the material on an integral weigh scale before sweeping the material into the hinged bale chamber door. The door is closed and the machine which triggers the vertical compression and automatic eject. The eject pushes the bale held in the bale chute out into a pre-formed bag.

Whilst the compress and eject functions are in operation the operator will be weighing the next batch of material and therefore providing a continuous flow of bales.

Nominal internal chute dimensions are – 120mm wide x 125mm high x 300mm long.

Capable of producing 3 to 4 bales per minute.

Price - £ 2,995.00 ex VAT, ex works, sold as seen and all interested parties please contact sales@challenger-group.co.uk
