

A used Ken Mills 3kg manual Baler.

This semi-automatic machine consists of a Ken Mills manufactured petpack baler with integrated manual weigh scale, vertical compression and horizontal eject functions.

The baler is supplied with a local control panel as shown below and a hydraulic power pack with all interconnecting hoses.

The semi-automatic Pet Pack baler utilises a simple control system. Operators weigh the material on an integral weigh scale before sweeping the material into the hinged bale chamber door. The door is closed and the machine which triggers the vertical compression and automatic eject. The eject pushes the bale held in the bale chute out into a pre-formed bag.

Whilst the compress and eject functions are in operation the operator will be weighing the next batch of material and therefore providing a continuous flow of bales.

Nominal internal chute dimensions are – 180mm wide x 260mm high x 450mm long.

Capable of producing 3 to 4 bales per minute.

Price - £ 3,280.00 ex VAT, ex works, sold as seen. (Reasonable offers will be considered)
