

DRYER – 4 STATION.

The Challenger drying stations are designed to dry standard 205 litre plastic drums internally and includes the following features.

- Two section heat exchanger c/w strainers and steam traps.
- High velocity fan.
- Interconnecting ducting.
- 4-off lance assemblies. Upright drum position.
- Local motor starter mounted on a support stand.

Please note: the drums should be vacuumed out prior to this drying process. (See Vac station literature)

The dryer requires the following services:

- 3 phase mains supply to the local control panel.
- Steam supply to the steam traps provided.

All equipment is manufactured to order at our manufacturing facility based in Kingston upon Hull (UK). We are happy to look at more bespoke requirements if required.
