

Drum VAC STATION.

The Challenger vac stations are designed to remove standing water retained within standard 205 litre plastic drums following the washing process and includes the following features.

- High volume vacuum side channel blower.
- Vacuum lance and support stand.
- Collection vessel with filters.
- Vacuum relief valve.
- Local motor starter mounted on a support stand.

The Vac station requires the following services:

- 3 phase mains supply to the local control panel.

All equipment is manufactured to order at our manufacturing facility based in Kingston upon Hull (UK). We are happy to look at more bespoke requirements if required.
