

## DRUM EXPANDER WITH FOUR FORMERS

The Challenger Drumtech Expander is usually used as a stand-alone semi automatic machine but can be made into a fully automatic machine for a production line if necessary.

It has been designed with four heavy-duty formers to mechanically expand inside standard open top 205-litre capacity steel drums to remove dents in the drums' circumference.

The machine has an integral electric motor driven hydraulic power unit.

### Technical Information

Production rate	60 drums per hour
Electrical supply	400/3/50 VAC
Environmental protection	IP55
Power requirement	7.5 kW
