

DRYING TUNNEL

The Challenger Drumtech Drying Tunnel is fully automatic and has been designed to site in a Drum Reconditioning Line immediately after the Automatic Paint Station to dry the recently painted drums before other operations take place.

The booth incorporates all safety features demanded by EU regulations with regards to painting with hazardous materials.

Heating is by means of steam battery heater with thermostatic control.

The transfer of drums into and from it is fully automatic.

Technical Information

Production rate	60 drums per hour
Electrical supply	400/3/50 VAC
Environmental protection	IP55
Power requirement	4.0 kW
Compressed air pressure	4.0 Bar
Steam	6 Bar
