

SINGLE ENDED CHIMBER

The Challenger Drumtech Single Ended Chimber is designed to reform the end seal chimbs of standard 205 litre capacity steel drums.

The machine needs to be hand loaded and on receipt of a signal, the chimbing roller automatically engages with the drum in position to reform the seal chimb. This machine will also cater for shorter 'remakes' if necessary.

This single ended operation machine enables the base seam of open head drums to be processed and both the head and base of closed top drums need to be processed individually. A fully Automatic Double Ended Chimber is available on request.

Technical Information

Production rate	60 drums per hour
Electrical supply	400/3/50 VAC
Environmental protection	IP55
Power requirement	2.2 kW
Compressed air pressure	4.5 Bar
Dimensions	2.0 m by 1.4 m by 1.2 m
