

## Two Identical refurbished Challenger Waste Compactors / Skip Loaders.

The Challenger (circa 2013) refurbished Waste Compactors have been developed to provide cost savings for the disposal of waste products. The heavy-duty fabricated machine clamps via turnbuckle clamping arms to a standard bottom entry roll on waste skip. A hydraulically powered charge box compresses the waste product into the skip opening and therefore maximises the skip capacity and reduces the frequency of collections. (The machine will require a means of feeding the inlet hopper with product to be compacted).

The compactor is supplied with integrated push button controls mounted to the main fabrication with all sensors and switches wired back to it. Local Control Panel functions include 75% full, full, Container in position, oil level low, oil temp high, start, stop, stop. The system also includes a manual / auto selector with manual controls. The system is powered by a 11-kW hydraulic power pack mounted on the back of the machine and includes all interconnecting hoses.

**We are asking for offers in the region of - £ 12,480.00 ex VAT per machine, all reasonable offers will be considered. The price is ex-works and sold as seen with viewing available by appointment only.**
