

SEMI-AUTOMATIC PET PACK BALER

- 0.5 – 2 Kg bales
- Hay / Straw / Wood Shavings
- Hydraulic Power Pack
- Material weighed prior to baling
- Selectable bale weight
- Produces consistent bale weight
- Produces consistent bale size
- Up to 230 bales per hour
- 1390mm x 700mm foot print

0.5 TO 1.0 KG BALE

1.0 TO 2.0 KG BALE

The semi-automatic Pet Pack baler utilises a simple control system. Operators weigh the material on an integral weigh scale, indication is shown when the preset weight is reached and then the material is pushed into the hinged bale chamber door. The door is closed and the machine sequence then produces a bale automatically while the next material is weighed. The finished bale is ejected through a bale chute over which operators have placed a bale bag. The baler is designed to meet the current Health and Safety and PUWER regulations with integral safety interlocks.
